

Hamworthy Combustion Group: Celebrating 95 years' Success – A true world leader

Hamworthy Combustion operates in one of the largest and most dynamic markets in the world: global, environmental, oil and gas. When we were established in 1914, the motto of the company was “Strength through Service”. This still holds true today. We aim to be a customer solutions provider in the high specialised markets we serve: hot water and steam raising, and downstream petrochemicals.

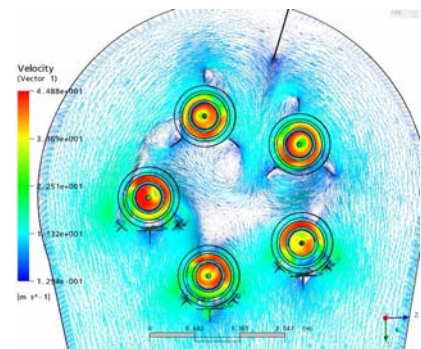

Customers continue to require reduced emissions, increased efficiency of fuel consumption and absolute safety. In response, we invest more than US\$ 1m p.a. in our Combustion Technology Centre.

It has 15 furnaces (0.5MW to 100MW+) and fires liquid, gaseous and blended fuels. It is industry-wide recognised as a world leading R&D facility.

Our global network of 18 country offices covers 80% of the world's GDP – and ensures we provide global solutions with local delivery.

We are a “full-product-life-cycle” provider. This includes New products, Aftermarket Spares (with in-country consignment stock), Service and Commissioning (100+ engineers located internationally), Training for customers and our own staff (at the Hamworthy Combustion Institute) and Customer burner testing (at the Hamworthy Combustion Technology Centre).

Our strength is our people: 600+ energised, committed and professional – including a modern Apprenticeship programme.

This is the basis of our growth of 15% p.a. for the past five years – and our foundation for continuing success in meeting customer needs.
