

Scotland: Powering Ahead

Hamworthy Combustion's service engineering resident team, based at Coatbridge, is powering ahead in Scotland. Recent flagship successes, which are in addition to the 24/7 service responsiveness to clients, are as follows:

Cockenzie Power Station: One of the largest coal fired power stations in the UK at 1200MW. Hamworthy Combustion was successful in winning a highly competitive bid to retrofit the oil fired Ignitor burners and associated controls on all four boilers. Phase 1 has involved the retrofit of 36 oil fired ignition burners on No.1 Boiler. The successful completion of this phase of the project has been lead by the Scottish based service team. Completion of the project will enable Scottish Power to progress toward its objective of making Cockenzie the main back up and peak loading plant for Longannet.

Scotland and Distilleries: Scotland is renowned globally for the highest quality and best range of whiskey. Hamworthy Combustion is proud to be the preferred supplier of combustion burners and systems to many of the leading distilleries. Following a seminar with existing and prospective customers in the distilling and allied sectors, a series of innovative and multi site Service Agreements have been negotiated. A dedicated service engineering capability has now been established in the North of Scotland, providing a local highly responsive service.

Hamworthy Combustion provides a full range of services in support of industrial, power and process applications. These include new product sales, commissioning, maintenance management (incorporating both boiler/heater and combustion systems), repair and spares.

Hamworthy Combustion can be contacted in Scotland at:

Unit 25, Greenhill Business Centre
Coatbridge
Lanarkshire ML5 2AF
